**2026/05/21 09:43:09 lanfr144 TG-442:**

**Sync resilience configurations, resolve SearXNG crash, and update docs with dynamic custom Git log ID and tag**

**[v1.0.1] \$**

## **Installation Guide**

### **Requirements**

- Ubuntu 24.04 LTS (or WSL2)
- Docker & Docker Compose
- 16GB RAM Minimum

### **Deployment Steps**

#### **1. Clone the Repository:**

- *Online Mode:* `git clone https://git.btshub.lu/lanfr/LocalFoodAI_lanfr144.git`
- *Offline/Disconnected Mode:* Copy the repository files directly to the target environment via SCP or USB storage.

2. `cd LocalFoodAI_lanfr144`

3. `chmod +x data_sync.sh backup_db.sh`

#### **4. Deploy Stack:**

- For regular production: `docker compose up -d --build`
- For local/offline single-node fallback: `docker compose -f docker-compose_skip.yml up -d`

5. Navigate to `http://localhost` (or `http://localhost:8502` for direct Streamlit port)
