**Sync resilience configurations, resolve
SearXNG crash, and update docs with
dynamic custom Git log ID and tag**

[v1.0.1] \$

User Guide

1. Clinical Data Search

Search for products using keywords. The system utilizes FULLTEXT matching to instantly return the top 10 relevant matches alongside macronutrient data.

2. My Plate Builder

Add portion sizes of different foods to calculate cumulative nutritional intake. Use the  icon to remove items.

3. Chat with AI

Ask the llama3.1 model complex dietary questions. It natively utilizes RAG Tool Calling to silently search the database and formulate clinical answers.
